

BUSINESS LEADERSHIP IN SUSTAINABILITY INNOVATION

Dragages Singapore has been contributing to shaping the Singapore skyline for over three decades, with a record of accomplishments for building prestigious and iconic projects such as the Singapore SportsHub, the Fullerton Hotel and CapitaSpring.

Innovation is deeply ingrained in the works of Dragages Singapore and with pressing issues on sustainability becoming more evident, Dragages Singapore takes on the challenge of being industry innovators and also a responsible and committed contractor. Dragages Singapore is the pioneer in PPVC innovation in the built environment, encouraging the growth and adoption of PPVC-type projects.

Other innovations adopted for the betterment of the built environment include mass engineered timber as a sustainable construction method, use of advanced precast system for improved productivity and quality control, as well as use of MEP modularization for increased workplace safety and quality assurance. Dragages Singapore has adopted several innovative green practices, including self-climbing formwork, extensive platform systems to reduce scaffolding, use of alternative wall systems as well as the Ampd Enertainer onsite power generation system for greener construction sites.
