

BUSINESS LEADERSHIP IN SUSTAINABILITY INNOVATION

KONE has committed to the most ambitious sustainability targets in the elevator and escalator industry, including carbon neutral operations by 2030, that have been validated by the Science Based Targets initiative (SBTi).

KONE was the first to champion for elevators and escalators to be included as a category in the Singapore Green Building Product (SGBP) certification scheme and worked closely with SGBC to develop the initial assessment criteria for determining energy efficiency of elevators and escalators. Today, KONE still leads the industry with the largest number of products (7 solutions) certified with the highest 4-tick Leader ratings.

Some of KONE's industry-transforming innovations include machine-room-less elevators, regenerative drive technology, ultra-light and durable carbon-fibre lift cables, escalator modernisation with maximum preservation of moving parts - all having significant positive impact on built environment sustainability.
