

BUSINESS LEADERSHIP IN SUSTAINABILITY INNOVATION

Vicplas is the first, uPVC pipe producer in Singapore to receive the 3-ticks Excellent rating under the Singapore Green Building Product (SGBP) certification scheme.

Vicplas' products are widely adopted in the Singapore built environment, including within numerous HDB Build-To-Order (BTO) housing projects as piping and civil engineering underground systems. This is the direct result of Vicplas' efforts to reformulate all its plastic products to be free of heavy metals since 2016 and through various green initiatives including investments in hybrid production equipment and process streamlining to improve energy efficiency and minimise production rejects. Its market leadership is built on the quality and reliability of their products.

With its efforts to focus on sustainability and environmental, social and governance factors (ESG), Vicplas is in the process of obtaining the highest-possible SGBP 4-ticks Leader rating for its products.
